

PILL 2.8 GUIDE • PHASE 2

The conference in the car

A YouTube talk as a source and the Audio Overview in the Critique format, in Gemini Notebook.

The idea

Have the talk critiqued instead of summarised, check in the source whatever makes you doubt, and write down yourself what you decide. The critique tells you what to check; what you take into the consulting room is your decision.

Do it yourself in 4 steps

- 1 Prepare the notebook.** In “Add sources”, paste the YouTube link to the talk. Add the reference guidelines on the topic alongside it, in PDF, and click on each source to check it has come in complete.
- 2 Get the critique.** In Studio, press “Audio Overview” and “Customize Audio Overview” opens. Choose “Critique”, the language and the length. In “Sources”, keep the talk and the guidelines. Paste the brief into “What should the AI hosts focus on in this episode?” and press “Generate”.
- 3 Listen to it in the car.** Download the audio in the phone app: it plays offline and with the screen locked. Whatever makes you doubt, write it down when you park.
- 4 Check and decide.** Paste the checking question with your doubts into the chat. Click on the citations and, if you need to, look at the slide in the video. Write a note with what you decide.

The critique brief • copy it

You are two vets from a small neighbourhood clinic that sees a lot of older cats.
Critique the talk. Don't summarise it.
Check the important points against the guidelines in the notebook:
whether they agree, disagree or don't cover it. The guidelines are not to be critiqued.
Separate what the speaker supports with studies from what is hypothesis or opinion.
End with three things: what changes anything in our practice, what doesn't, and what should be checked.
No specific drugs, doses or diets.

Change the first line to describe your clinic and your patients.

The checking question • copy it into the chat

I want to check two things the critique says about the talk.

For each one, tell me:

1. What exactly the speaker says, with the quote.
2. Whether she supports it with a study, which one and with how many animals.
3. What the guidelines in the notebook say, with the quote. If they don't cover it, write "not stated".
4. In one line: whether the critique is faithful to the talk (yes, no or partly).

Don't give me treatment recommendations.

First: (what made you doubt)

Second: (what made you doubt)

The note of what you decide • copy it

I take into the consulting room:

Needs checking:

Not in my clinic:

Who organises it and who pays:

Before you start

- **No captions, no source.** The video has to be public and have a transcript. If it is a livestream that has just ended, sometimes it doesn't have one yet.
- **What is on the slides isn't there.** Only what is said comes in. If a figure only appears on a slide, the notebook doesn't know it.
- **The congress and the sponsor, in the video.** The notebook usually doesn't know them. Look at the header of the slides and listen to the first few seconds.
- **"Longer", only in English and with Deep Dive.** The Critique only has "Shorter" and "Default". None of the audios in our test went over sixteen minutes.
- **The same format can have two names.** In the Spanish interface, Deep Dive is called «Información detallada» in the customize window and «En profundidad» in the Studio list.
- **Guidelines alongside help, but they can mix up facts.** In our test, the audio pinned a fact from the guideline on the talk.
- **The chat hasn't heard the audio.** If you ask it what it says, it imagines it. You write the doubts down yourself.
- **The Critique talks as if the material were yours.** At the end it thanks the author for sending it in. That is why it also works for what you write yourself.
- **Drugs, doses and diets, out of the brief.** Even so, some slip through: in our test, the English audio talked about when to "intervene immediately". Clinical matters are your decision.
- **It takes time and uses up your quota.** A default audio took about 7 minutes, and the long critique with guidelines about 15. With the free account, two audios took usage to 80%. At El Roble they do it with the clinic's paid account.
- **At the wheel, just listen.** Doubts are written down when you park.
- **The buttons will keep changing.** What will stay the same: having the talk critiqued instead of summarised, checking in the source whatever makes you doubt, and writing down yourself what you decide.

The sources, first-hand

To cite something in an article, a session or the morning briefing, use the talk, the guideline or the original study. Never the audio.

- [Pathophysiology of Early and Progressive CKD in Cats](#)
The talk, on YouTube: 39 minutes in English. Companion Animal Nutrition Summit 2024, organised by the Purina Institute.
