PILL 2.9 GUIDE · PHASE 2

The protocol the locum watches in two minutes

A Drive Doc as a source and the Video Overview in the Short format, in Gemini Notebook.

The idea

A one-minute video for each thing the newcomer can't get wrong, watched with the document open beside it. What's wrong gets fixed in the document, not in the video. Everything else, they ask the notebook.

Do it yourself in 4 steps

1. **Set up the notebook.** Put your operations document on Drive, as a Google Doc. In a new notebook, «Add sources» → Drive, and click the source to check it all came in.
2. **Pick the things and make one video for each.** In Studio, Video Overview → Short, in your language. In «Custom topic», paste the brief with your thing and click «Generate now».
3. **Watch it with the document alongside.** Use the check question in the chat to get the times and the steps with their quotes. If something is wrong, fix it in the document, sync the source in the notebook and redo the video with «View custom prompt».
4. **Send it.** Download the videos, share the notebook and the document as a viewer, and send the message.

The video brief · copy it

> This video is for an assistant who is coming to cover for a week and has never been to the clinic.
> Explain only (the thing), in the order it is done: from (the first step) to (the last).
> Make sure (the time, what can't be forgotten) is clear.
> Nothing from other sections of the document, and no advice that isn't in it.
> No phone numbers or codes.
> Speak to them informally.

Replace what's in brackets with your thing.

The check question · copy it into the chat

> From section (number) of the document, give me a list of:
> 1. Every time that appears, with the quote.
> 2. The steps, in order, with the quote.
> 3. What to do if something goes wrong, with the quote.
> Only what's in the document. If something isn't stated, write «not stated».

The message for the newcomer · copy it

> Hi, (name). I'm sending you (number) one-minute videos: (the things).
> Anything else, ask the notebook, it knows the whole document: (link).
> If the video and the document don't say the same thing, go with the document.
> If the notebook tells you something isn't stated, write it down for me.

Before you start

- **A Doc, not a PDF.** Only Docs, Sheets and Slides on Drive sync with the notebook. An uploaded PDF or Word file is a snapshot.
- **After changing the document, sync.** Click the source in the notebook and press «Click to sync with Google Drive». In our test it didn't update by itself.
- **The video doesn't notice changes.** And it doesn't warn you. If you fix the document, you redo the video.
- **It comes out different every time.** Same brief, same message, different drawings. Don't expect the same video twice.
- **It invents details.** In the test, the closing video added something that wasn't in the document and left out three steps. That's why you watch it with the document alongside.
- **Sharing the notebook isn't enough.** You also have to share the Drive document, or the chat won't answer the viewer. The viewer can't generate anything, and you don't see what they ask.
- **No codes or personal phone numbers in the document.** Anyone with the notebook can read the sources. At El Roble, Marta gives out the alarm code in person.
- **Send the file.** Sharing the video by link means giving full access to the notebook.
- **It takes time and usage.** The videos we timed took ten and thirteen minutes. On the free account, one short video used a third of the hourly limit, and it ran out on the third. El Roble uses the clinic's paid account.
- **It has a watermark.** At the end of every video.
- **The buttons will keep changing.** What will stay the same: one minute for each thing, watching it with the document alongside, and fixing the document, not the video.

Extra · The newcomer's welcome

With the same notebook, you can also prepare the newcomer's first day. An interactive report tells them about the whole place, top to bottom, like a lesson. A mind map lets them browse: they open the branch they're interested in and, if they click a card, they ask the chat about it. And whatever isn't in the document, you can say in a voice note from your phone, which goes in as one more source.

- **The interactive report.** In Studio → Reports → Interactive. There's a single template, «Learning Overview». It starts like a lesson («By the end of this lesson, you'll be able to…») and goes block by block, with a table of contents. Inside, it suggests Studio items, a presentation or an audio, and generates them right there. It can't be downloaded: it lives in the notebook.
- **The mind map.** One branch for each part of the document. You open and close them, and clicking a card takes you to the chat with that question. When you download it, you get an image of whatever is open at that moment.
- **The voice note.** In the phone app, under Sources, the microphone. It records up to an hour and goes in as one more source, named with the date. It only counts for what you generate from then on: the report and map already made don't know about it.

The report puts everything in, including what the substitute won't touch, like the operating room or the X-rays. Read it before sending it and tell them where to start.

Clínica El Roble and its characters are fictional. The test with Gemini Notebook is real; the buttons will keep changing.
